In Situ Permeability

Field Fleet ("the girls")

Esme – 10-20t all-terrain

Beryl – 15t 4 wheel drive

Eunice – 20t 6x4 bogey

Baby Jayne – 15t portable

Esme Can Go Anywhere (almost)

Esme, our all-terrain rig has just finished an exciting project at Weipa, for Rio Tinto Alcan. This included undertaking tests from the surface of an operating red mud tailings dam. Un-ballasted, we were able to push tests with up to 110kN thrust, while accessing an extremely soft area. Esme can be ballasted to 230kN on better access sites.

And IGS People Will Go Anywhere

post-conference look-around with IGS friends

Allan and Chris have just returned from Egypt after attending the 17th International Conference on Soil Mechanics & Geotechnical Engineering. We learnt a lot at the conference, but we also learnt that IGS is "up with the best" of the world's in situ testing practitioners.

reducing geotechnical uncertainty
