PPI Piston Sampling

Piezometer Installation

In Situ Permeability

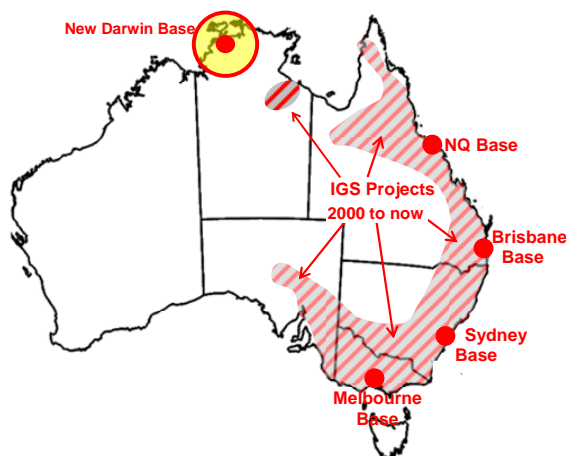

## New Darwin Base

*We are pleased to announce our new commercial operation based from Darwin. Another IGS "Virtual Office".*

From this month onwards, IGS will be basing a versatile array of in situ testing rigs and equipment in Darwin. This equipment will be available for work based out of Darwin on a local basis, in a similar way to which have been operating commercially from Brisbane since 2000, from Sydney since 2009, from Melbourne since 2010, and from Townsville since 2011.

This new Darwin base offers very obvious cost advantages for any work around Darwin or from Darwin, into NT and the northern extents of WA. We have just completed our first NT projects at McArthur River and at the port of Bing Bong, near Borroloola.

*the adjacent map shows our current area of operations*

## Equipment & Services from Darwin

These three rigs provide incredible versatility in accessing sites and testing.

All of our testing, sampling and instrumentation services listed on this sheet are available.
