farewell Silvano Marchetti

**Professor
Silvano
Marchetti
passed away on
21 December
2016**

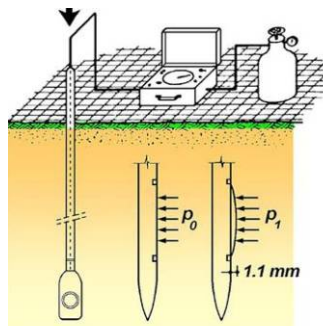

Professor Silvano Marchetti is famous in the geo-world as the man who conceived the DMT and later the SDMT, and developed them to their current place in our everyday in situ testing practice; tools that can be described as masterpieces of simplicity, robustness and technical excellence.

Some refer to him as the "Knight of the Blade".

Here at IGS we refer to him as a "best friend and mentor"; someone who had always been available to listen, help and advise us.

His passing is a great loss to the geotechnical fraternity; a geo-giant whose name and contribution will remain, even in his absence.

these photos are of our friend, not of the professor and inventor

reducing geotechnical uncertainty
